JANUARY 1964

PART 1

JOURNAL of the

Soil Mechanics
and Foundations
Division

PROCEEDINGS OF THE

AMERICAN SOCIETY

OF CIVIL ENGINEERS

BITCOLD
R
ASCE
1964
1
2-R-7

BASIC REQUIREMENTS FOR MANUSCRIPTS

Original papers and discussions of current papers should be submitted to the Manager of Technical Publications, ASCE. Authors should indicate the technical division to which the paper is referred. The final date on which a discussion should reach the Society is given as a footnote with each paper. Those who are planning to submit material will expedite the review and publication procedures by complying with the following basic requirements:

1. Titles must have a length not exceeding 50 characters and spaces.
2. A summary of approximately 50 words must accompany the paper, a 300-word synopsis must precede it, and a set of conclusions must end it.
3. The manuscript (an original ribbon copy and two duplicate copies) should be double-spaced on one side of 8½-inch by 11-inch paper. Three copies of all illustrations, tables, etc., must be included.
4. The author's full name, Society membership grade, and footnote reference stating present employment must appear on the first page of the paper.
5. Mathematics are recomposed from the copy that is submitted. Because of this, it is necessary that letters be drawn carefully, and that special symbols be properly identified. The letter symbols used should be defined where they first appear, in the illustrations or in the text, and arranged alphabetically in an Appendix.
6. Tables should be typed (an original ribbon copy and two duplicate copies) on one side of 8½-inch by 11-inch paper. Specific illustrations and explanation must be made in the text for each table.
7. Illustrations must be drawn in black ink on one side of 8½-inch by 11-inch paper. Because illustrations will be reproduced with a width of between 3-inches and 4½-inches, the lettering must be large enough to be legible at this width. Photographs should be submitted as glossy prints. Explanations and descriptions must be made within the text for each illustration.
8. The desirable average length of a paper is about 12,000 words and the absolute maximum is 18,000 words. As an approximation, each full page of typed text, table, or illustration is the equivalent of 300 words.
9. Technical papers intended for publication must be written in the third person.
10. A list of key words and an informative abstract should be provided for information retrieval purposes.

Reprints from this Journal may be made on condition that the full title, name of author, name of publication, page reference, and date of publication by the Society are given. The Society is not responsible for any statement made or opinion expressed in its publications.

This Journal is published bi-monthly by the American Society of Civil Engineers. Publication office is at 2500 South State Street, Ann Arbor, Michigan. Editorial and General Offices are at United Engineering Center, 345 East 47th Street, New York 17, N.Y. \$4.00 of a member's dues are applied as a subscription to this Journal. Second-class postage paid at Ann Arbor, Michigan.

The index for 1962 was published as ASCE Publication 1963-10 (list price \$2.00); indexes for previous years are also available.

Note.—Part 2 of this Journal is the 1964-1 Newsletter of the Soil Mechanics Division.

The three preceding issues of this Journal are dated July 1963, September 1963, and November 1963.

DISCUSSION

Bearing Capacity of Foundations, by Arpad Balla. (October, 1962. Prior discussion: February, March, May, 1963. Discussion closed.) by Arpad Balla (closure)	95
Ground Displacements from Air-Blast Loading, by Stanley D. Wilson and Earl A. Sibley. (December, 1962. Prior discussion: July, 1963. Discussion closed.) by Stanley D. Wilson and Earl A. Sibley (closure)	99
Determining the Capacity of Bent Piles, by Sidney M. Johnson. (December, 1963. Prior discussion: May, July, 1963. Discussion closed.) by Sidney M. Johnson (closure)	101
Soil Stabilization with Cement and Sodium Additives, by Za-Chieh Moh. (December, 1962. Prior discussion: May, July, 1963. Discussion closed.) by Za-Chieh Moh (closure)	103
Comparisons of One and Two-Specimen CFS Tests, by John H. Schmertmann. (December, 1962. Prior discussion: July, 1963. Discussion closed.) by John H. Schmertmann (closure)	107
Elastic Wave Velocities in Granular Soils, by B. O. Hardin and F. E. Richart, Jr. (February, 1963. Prior discussion: September, 1963. Discussion closed.) by B. O. Hardin and F. E. Richart, Jr. (closure)	109
Oahe Dam: Influence of Shale on Oahe Power Structures Design, by E. A. Johns, R. G. Burnett, and C. L. Craig. (February, 1963. Prior discussion: July, 1963. Discussion closed.) by E. A. Johns, R. G. Burnett, and C. L. Craig (closure)	119
Hyperbolic Stress-Strain Response: Cohesive Soils, by Robert L. Kondner. (February, 1963. Prior discussion: May, July, 1963. Discussion closed.) by Robert L. Kondner (closure).	121
Bearing Capacity of Piles in Cohesionless Soils, by R. L. Nordlund. (May, 1963. Prior discussion: November, 1963. Discussion closed.) by Allen G. Thurman	127
by W. Irvine Low	129
by S. L. Agarwal	130

Stress Dilatancy, Earth Pressures, and Slopes, by P. W. Rowe. (May, 1963. Prior discussion: November, 1963. Discussion closed.)	
by Ronald F. Scott	133
by George G. Meyerhof	135
by K. H. Roscoe and A. N. Schofield	136
by Pijushkanti Som and S. Das	150
Laterally Loaded Piles in a Layered Soil System, by M. T. Davisson and H. L. Gill. (May, 1963. Prior discussion: None. Discussion closed.)	
by S. L. Agarwal	155
Foundation Modulus Tests for Karaj Arch Dam, by W. A. Waldorf, J. A. Veltrop, and J. J. Curtis. (July, 1963. Prior discussion: None. Discussion closed.)	
by Tomas Shuk	157
Expansion of a Cavity in a Saturated Clay Medium, by B. Ladanyi. (July, 1963. Prior discussion: None. Discussion closed.)	
by George G. Meyerhof	163
Laminar and Turbulent Flow of Water Through Sand, by M. Anandakrishnan and G. H. Varadarajulu. (September, 1963. Prior discussion: None. Discussion closes February 1, 1964.)	
by John C. Ward	165
